PROJECTS

Online Food Delivery System Website
Competence: HTML, CSS, Javascript and Bootstrap Developed website to simplify the food ordering process. The proposed system shows an user interface and update the menu with all available options so that it eases the customer work. Customer can choose more than one item to make an order and can view order details before logging off. The order confirmation is sent to the customer. The order is placed in the queue and updated in the database and returned in real time. This system assists the staff to go through the orders in real time and process it efficiently with minimal errors.

Invoice Management System
Competence: HTML, CSS, Javascript and Bootstrap Developed website. An Invoice Management System (IMS) is a software or platform designed to streamline and automate the process of creating, sending, and managing invoices. It is an essential tool for business of all sizes, as it helps improve financial efficiency, reduce errors, and enhance overall accounting and billing process.

Density Based Traffic System
A density-based traffic system project using Arduino is a smart traffic management system that uses sensors to monitor the density of vehicles on the road and adjust traffic signals accordingly. This project aims to improve traffic flow, reduce congestion, and enhance overall road safety.
